

"upliftment and empowerment through education and training"

## EFFECTIVE OUTCOME BASED TRAINING THAT INCREASES PRODUCTIVITY AND ADDS TO PROFITABILITY

Skills development training focuses on up- skilling and re-skilling individuals in a particular vocation/task/job or career path. It aims to ensure that individuals are competent in their area of expertise and ensures that any skills programmes or courses completed add to the efficiency of their job at hand. It involves outcomes based training, where learners actually "do" and practice what they are taught.

Prior to certificates being issued, learners need to prove their competence against a set of outcomes and associated assessment criteria by completing projects, written assessments or portfolios of evidence.

## WHY YONKE ENVIRONMENTAL SOLUTIONS?

Yonke Environmental Solutions is a private Training Provider committed to the success of its learners, stakeholders and the transport and warehousing sector as a whole. Yonke prides itself in offering dynamic training courses at the most cost effective prices, using professionally trained facilitators and full accredited assessors.

We are a fully accredited with the Transport Education and Training Authorities as well as an Authorised Training Body for the Department of Transport.

## Maintaining occupational health, safety and general housekeeping Based on SAQA Unit Standard 8016 – NQF3

A learner accredited with this standard will be able to demonstrate applied competence in occupational health, safety awareness of environmental issues and general housekeeping based on statutory and industry requirements.

This course is aimed at individuals that have significant responsibility for ensuring the quality of health, safety, environmental and general housekeeping across a wide range of freight handling contexts.

## OUTCOMES

By the end of the course, the learners will be to:

- Use the correct protective clothing and equipment in relation to specific freight and environments.
- Implement and comply with the relevant procedures, material requirements and methodologies in maintaining prescribed safety, health and environmental standards.
- Implement selected mechanisms for the minimising of safety, health and environmental impacts and risks as specified in current legislation (e.g. Occupational Health and Safety Act), NOSA requirements and organisational policies (e.g. removal of waste).
